

**Problem 1**

(a) Find the  $R_{eq}$  in the following circuit.

$$R_{eq} = \underline{\hspace{10mm}}$$

(b) In the following circuit, find  $i$  and the power absorbed or delivered by  $2i$  dependent source.

$$i = \underline{\hspace{10mm}}$$

$$P = \underline{\hspace{10mm}}$$

Absorbed \_\_\_\_\_ Delivered \_\_\_\_\_

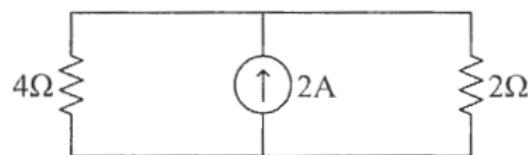

**Problem 1 (25 points)**

(a) (4 pts) A complex number  $Z$  is given as

(i)  $Z = (1 + j)^3$       find       $|Z| = \underline{\hspace{5mm}}$        $\angle Z = \underline{\hspace{5mm}}$

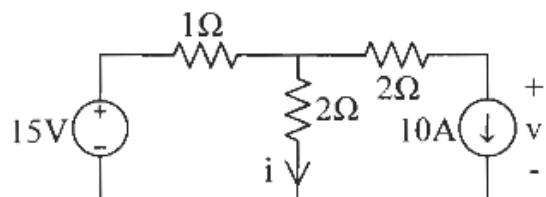

(ii)  $Z = (1 - j)e^{-j\frac{\pi}{4}}$       find       $|Z| = \underline{\hspace{5mm}}$        $\angle Z = \underline{\hspace{5mm}}$

(d) (5 pts) In the following circuit, how much power is supplied by 2A source.

$$P = \underline{\hspace{10mm}}$$

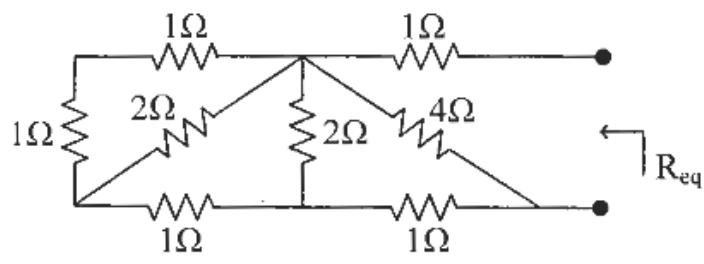

(a) In the following circuit, find  $v$  and  $i$ .

$$v = \underline{\hspace{10mm}}$$

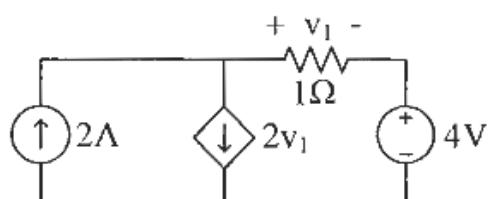

$$i = \underline{\hspace{10mm}}$$

(b) Find  $R_{eq}$  in the following circuit.

$$R_{eq} = \underline{\hspace{10mm}}$$

(c) For the circuit below, find  $v_1$  and the power, absorbed or delivered by 4V source.

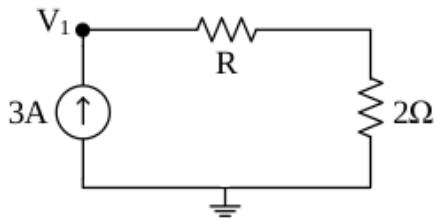

$$v_1 = \underline{\hspace{10mm}}$$

$$P = \underline{\hspace{10mm}}$$

absorbed \_\_\_\_\_ delivered \_\_\_\_\_

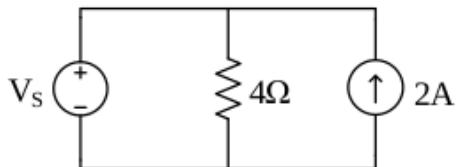

- (a)** Consider the circuit below. Determine the value of the resistance  $R$  and of the node voltage  $V_1$  if the absorbed power by that resistor  $R$  is 3W.

$$R = \underline{\hspace{10cm}}$$

$$V_1 = \underline{\hspace{10cm}}$$

- (b)** Consider the circuit below. Determine the value of  $V_s$  and the absorbed power at the voltage source if the absorbed power at the current source is 6W. (indicate if this power is absorbed or injected)

$$V_s = \underline{\hspace{10cm}}$$

$$P_s = \underline{\hspace{10cm}}$$

absorbed     injected

- (c)** Determine the magnitude and phase of the complex number  $Z = 2 + j6 + (1 + j)^6$ .

$$|Z| = \underline{\hspace{10cm}}$$

$$\angle Z = \underline{\hspace{10cm}}$$
